Recruitment Team Betclic

Tagliaferro Business Centre, Gaiety Lane,
Sliema, Malta.

Dear Recruitment Team,

I am writing to express my strong interest in the Computer Engineering internship at Betclic, with a specific focus on the Sportsbook and Odds-making department. As a developer and a devoted sports enthusiast, I am fascinated by the mathematical and logical challenges behind calculating real-time betting odds. I believe my technical background in algorithmic logic and data structures makes me the ideal candidate to contribute to this core area of your business.

My project experience has provided me with a strong foundation in the logic required for this role. In my Minesweeper (Campo DEISlado) project in Kotlin, I developed complex algorithms to handle probability-based bomb generation and recursive logic, which is fundamental when translating game variables into accurate betting odds. Furthermore, I am currently building a Data Analysis System in Java to process large-scale demographic statistics. My ability to implement efficient data structures is crucial for the Sportsbook department, where thousands of data points must be analyzed to update odds instantly.

Beyond my technical skills, my background as a football fan allows me to understand how specific game events impact the probability of an outcome, providing me with the analytical mindset necessary for professional odds-making. I am eager to apply my technical rigor and passion for sports to help Betclic maintain its position as a market leader. I am confident that my fast learner profile will allow me to

quickly master your specialized tools and
contribute to the team's success from day one.

Thank you for your time and consideration.

Yours sincerely,

Pedro Rosa
